

Ornamental Column Capitals

Ornamental capitals are manufactured from a number of composite materials including fiberglass. Capitals can be manufactured load-bearing to hold substantial weight and are designed with architecturally correct proportions to the size and style of columns. Each capital is a reproduction of ancient Roman and Greek architecture. The fine detail and craftsmanship is seen in each ornamental capital. ARCHITECTURAL FIBERGLASS, INC. can mold off of existing capitals to create historical reproductions of the original architecture. This includes other decorative ornamentation such as cornice and columns.

Ornamental capitals are interchangeable with all three column material types. Most capitals can be manufactured to accommodate square columns. Ask for pricing and availability.
